Report Reference Number	2024 AQAP
Date	October 2024

Executive Summary

This Air Quality Action Plan (AQAP) has been produced as part of our statutory duties required by the Local Air Quality Management framework. It outlines the action we will take to improve air quality in South Kesteven District Council between 2024 - 2029.

This action plan replaces the previous action plan published in 2016. Projects delivered through the past action plan include completion of phase 1 and 2 of the Grantham Southern relief road; ongoing work to promote cycling, walking and public transport; an anti-idling campaign focused in and around the AQMA; and improvements in South Kesteven District Council's own vehicle fleet.

Air pollution is associated with several adverse health impacts. It is recognised as a contributing factor in the onset of heart disease and cancer. Additionally, air pollution particularly affects the most vulnerable in society: children and older people, and those with heart and lung conditions. There is also often a strong correlation with equalities issues because areas with poor air quality are also often the less affluent areas^{1,2}.

The annual health cost to society of the impacts of particulate matter alone in the UK is estimated to be around £16 billion³. South Kesteven District Council is committed to reducing the exposure of people in South Kesteven to poor air quality to improve health.

We have developed actions that can be considered under 5 broad topics:

- Promoting low emission transport
- Promoting travel alternatives
- Public information
- Traffic management

¹ Environmental equity, air quality, socioeconomic status, and respiratory health, 2010

² Air quality and social deprivation in the UK: an environmental inequalities analysis, 2006

³ Defra. Abatement cost guidance for valuing changes in air quality, May 2013

- Vehicle fleet efficiency
- Our priorities are to sustain a downward trend in emissions reduction through partnership work. The delivery of the Grantham Southern relief road remains a major focus to divert traffic away from the town centre. Traffic management and infrastructure for walking and cycling are prioritised by the Grantham Transport Strategy published in 2022. The Clean Air Lincolnshire project will continue to raise awareness of issues of air quality and provide additional monitoring data within the AQMA. Vehicle fleet efficiency and electrification opportunities will continue to be implemented by South Kesteven District Council.

In this AQAP we outline how we plan to effectively tackle air quality issues within our control. However, we recognise that there are many air quality policy areas that are outside of our influence (such as vehicle emissions standards agreed in Europe), but for which we may have useful evidence, and so we will continue to work with regional and central government on policies and issues beyond South Kesteven District Council's direct influence.

Responsibilities and Commitment

This AQAP was prepared by the Environmental Health department of South Kesteven District Council with the support and agreement of the following officers and departments:

The Climate Change and Sustainability Manager

The final AQAP will be approved by:

Councillor Rhea Rayside – Cabinet Member for People and Communities.

Graham Watts - Assistant Director (Governance and Public Protection)

Ayeisha Kirkham – Head of Service – Public Protection

The AQAP has been developed in conjunction with Lincolnshire County Council from a highways and sustainability perspective.

This draft AQAP has not been signed off by a Director of Public Health. However, the final AQAP will be reviewed by the Director of Public Health.

South Kesteven District Council

This Air Quality Action Plan (AQAP) has been prepared and developed in partnership with other relevant bodies, particularly the Highways team of Lincolnshire County Council (LCC) and the relevant teams of South Kesteven District Council to incorporate localised engineered measures in the AQMA.

This AQAP will be subject to an annual review, appraisal of progress and South Kesteven District Councils Environment and Scrutiny Committee. Progress each year will be reported in the Annual Status Reports (ASRs) produced by South Kesteven District Council, as part of our statutory Local Air Quality Management duties.

If you have any comments on this AQAP, please send them to Tom Amblin-Lightowler at:

1 Introduction

This report outlines the actions that South Kesteven District Council will deliver between 2024 – 2029 to reduce concentrations of air pollutants and exposure to air pollution; thereby positively impacting on the health and quality of life of residents and visitors to the South Kesteven District Council administrative area.

It has been developed in recognition of the legal requirement on the local authority to work towards Air Quality Strategy (AQS) objectives under Part IV of the Environment Act 1995 and relevant regulations made under that part and to meet the requirements of the Local Air Quality Management (LAQM) statutory process.

This Plan will be reviewed every five years at the latest and progress on measures set out within this Plan will be reported on annually within South Kesteven District Council's air quality ASR.

South Kesteven District Council is committed to working to improve the air quality in our district where levels of air pollutants are exceeding air quality objectives.

Air quality in South Kesteven is generally good. However, there are locations where pollutant levels are high, with the highest levels being along narrow, congested street canyons (roads with properties close to the road on either side of the street) in Grantham.

Monitoring has revealed that the annual mean air quality objectives for NO₂ for the previous 3 years have been close to the National Air Quality objective of 40 µg/m³ but have not exceeded this threshold at any of the monitoring locations in Grantham town centre, some of which are within an Air Quality Management Area (AQMA).

Monitoring data for the last 5 years with the Air Quality Management Area have identified:

- There is an overall decreasing trend in nitrogen dioxide air pollution at monitoring sites.
- There remain three sites which have only been under objective levels for air pollution for the last 2-3 years, which includes 2020 where results are not considered typical due to abnormal traffic levels.

South Kesteven District Council

- There were no exceedances of the 1 hour mean target for NO₂ air pollution for the last 5 years.

Department for Food and Rural Affairs (DEFRA) based upon the lack of exceedances of the 1 hour mean target recommend that this be removed from the current AQMA.

There is now an intention to review the existing AQMA to reflect the updated NO₂ monitoring data.

The district of South Kesteven is very diverse, comprising principal towns of Grantham, Stamford, Bourne and The Deepings surrounded by small rural villages and hamlets.

The main source of air pollution in the district is road traffic emissions from major roads, notably the A1, A52, A15 and A607. The district and surrounding areas are illustrated in Figure 1.

Figure 1 – South Kesteven District Council boundary and Surrounding Area

2 Summary of Current Air Quality in South Kesteven District Council

Please refer to the latest ASR from South Kesteven District Council.

In 2013, the council declared an AQMA for the area encompassing the main roads in the town centre of Grantham. The AQMA is illustrated in Figure 2. Several roads included within the AQMA are likely to lead to a “street canyon effect” due to the road and building layout, trapping, and preventing the dispersion of air pollutant emissions from road-traffic, therefore explaining the higher levels of pollution in these areas.

The 2011 Detailed / Further Assessment concluded that around 320 homes lie within the Grantham town centre AQMA, equating to an exposed population of around 650. The NO₂ monitoring data for the previous 5 years as stated have not exceeded the annual or hourly means and we are confident that the proposed measure included within the AQAP will continue to see a downward trend and remain below the National Air Quality Objectives.

Historical source apportionment indicated that emissions from local moving traffic are the main contributor to overall NO₂ levels, although idling emissions due to queuing vehicles are also particularly important near traffic lights. Given that there have been no substantial changes to the physical environment and that it remains predominantly a residential and retail setting it remains highly likely that that local moving traffic is the main contributor of NO₂. A recent source apportionment exercise has been completed, which found that diesel cars are responsible for just over half (50.3% of NO_x emissions in the measured area, followed by diesel light goods vehicles (28.2%). More detail is available within the Source Apportionment chapter of this document.

The council carries out passive NO₂ monitoring at 37 sites across the district using diffusion tubes. This includes 15 duplicate tube and four triplicate tube locations, which are aimed at improving reliability of the data.

Full details of monitoring data are shown within the ASR:

[South Kesteven District Council ASR 2023 v3.pdf \(southkesteven.gov.uk\)](#)

3 South Kesteven District Council's Air Quality Priorities

3.1 Public Health Context

Air pollution is associated with several adverse health impacts. It is recognised as a contributing factor in the onset of both heart and respiratory diseases and lung cancer⁴. Additionally, air pollution particularly affects the most vulnerable in society: children, the elderly, and those with existing heart and lung conditions. There is also often a strong correlation with equalities issues because areas with poor air quality are also often less affluent areas⁵⁶.

The mortality burden of air pollution within the UK is equivalent to 29,000 to 43,000 deaths at typical ages⁷, with a total estimated healthcare cost to the NHS and social care of £157 million in 2017⁸.

Given that South Kesteven is predominantly a rural setting and that the NO₂ monitoring data from within the district is below the National Air Quality Objectives the healthy implications are deemed to be minimal.

3.2 Planning and Policy Context

South Kesteven District's Local Plan 2011-2036 has links to improving air quality with the considerations for contributing to low-carbon travel through the expectations for residential and commercial developments to provide electric vehicle charging points⁹.

⁴ Health Matters: air pollution - GOV.UK (www.gov.uk)

⁵ Public Health England. Air Quality: A Briefing for Directors of Public Health, 2017

⁶ Defra, Air quality and social deprivation in the UK: an environmental inequalities analysis, 2006.

⁷ Defra, Air quality appraisal: damage cost guidance, January 2023

⁸ Public Health England. Estimation of costs to the NHS and social care due to the health impacts of air pollution: summary report, May 2018

⁹ South Kesteven District Council. Local Plan 2011-2036

It is hoped that this will encourage the switch to electric vehicles and reduce the contribution of traffic towards NO₂ levels.

Additionally larger scale developments have development principles specified within the Local Plan to provide footway and cycleway connections to local amenities.

3.3 Source Apportionment

Source apportionment has been carried out for the modelled receptors along the road links that are either within the AQMA or lead into the AQMA. Apportionment for both NO_x and NO₂ concentrations has been completed for the following vehicle classes:

- Petrol and Diesel Cars
- Petrol and Diesel LGV's
- Rigid HGV's
- Artic HGV's
- Buses and Coaches
- Other (including Motorcycle, Hybrid and EV cars)

It is worth noting that NO_x concentrations are always higher than those for NO₂ since NO_x is made up of NO and NO₂. There is no air quality limit for human health for NO_x but is nevertheless a useful indicator when considering source apportionment. Results are illustrated in Figure 3.1 to Figure 3.6.

Table 3.1 shows the percentage contribution of road and background sources. Across all modelled receptors, 57.07% of the NO_x contribution is from road sources, and the remaining 42.93% is from background sources. Of the background contribution, 23.65% is from the local background, whilst 19.28% is from regional the regional background.

Table 3.1 – Total NO_x Source Apportionment Average Across All Receptors

Results	Local Background NO _x	Regional Background NO _x	Local Road NO _x
NO _x Concentration (µg/m ³)	7.85	6.40	18.94
Percentage of total NO _x	23.65%	19.28%	57.07%

Local background NO_x, which is considered to be the emissions a local authority has influence over, including building, road and rail emissions etc, accounts for 23.65% of the total NO_x concentration on average at all receptor location. Regional background NO_x concentrations account for those emissions that the local authority has no

influence over, with these emissions forming 19.28% of the total NO_x concentration on average across all modelled receptors. Therefore, a total of 57.07% of NO_x emissions on average within the AQMA is derived from local road traffic.

The source apportionment results provide the relative contribution (as a percentage) of each vehicle type towards a specific pollutant. Therefore, when considering the average NO_x concentration across all modelled receptors, road traffic is responsible for 57.07% of emissions. Of the total road NO_x, diesel cars are the greatest contributor accounting for 50.3% of emissions, followed by diesel light good vehicles (28.2%) and rigid HGVs (8.4%).

Figure 3.1– NO_x Source Apportionment (Average Across All Modelled Receptors)

When considering the modelled receptor location at which the maximum road NO_x concentration is observed (Receptor 41), road traffic is responsible for 82.2% of total NO_x emissions. Of the road traffic proportion, 53.7% is from diesel cars, 30.4% from diesel light good vehicles and 6.8% from petrol cars.

These percentages are similar to the average across all modelled receptors, albeit rigid HGVs are more prevalent in the wider context of all modelled receptors comparative to the maximum location (Receptor 41). This is likely due to the large sized AQMA, so the influence of emissions on the maximum receptor is broadly similar to those

experienced across the whole of the AQMA albeit petrol cars may be more influential here due to the close proximity of the service station and local school.

Figure 3.2 - NO_x Source Apportionment (At Maximum Modelled Receptor 41)

3.4 Required Reduction in Emissions

As the current monitored levels of NO₂ for the last 3 years are below the National Air Quality Objectives it has been determined as unnecessary to complete a required reduction in NO₂ exercise. The actions detailed within this AQAP once completed are intended to continue to reduce levels further and maintain them below the AQS objectives.

3.5 Key Priorities

Our priorities are to sustain a downward trend in emissions reduction through partnership work. The delivery of the Grantham Southern relief road remains a major focus to divert traffic away from the town centre. Traffic management and infrastructure for walking and cycling are prioritised by the Grantham Transport Strategy published in 2022. The Clean Air Lincolnshire project will continue to raise awareness of issues of air quality and provide additional monitoring data within the AQMA. Vehicle fleet

efficiency and electrification opportunities will continue to be implemented by South Kesteven District Council.

- Priority 1 - The delivery of the Grantham Southern relief road remains a major focus to divert traffic away from the town centre – Phase 3
- Priority 2 – Implementation of Traffic management and infrastructure for walking and cycling as prioritised by the Grantham Transport Strategy published in 2022.
- Priority 3 – Raise continual awareness in conjunction with the Clean Air Lincolnshire project.

4 Development and Implementation of South Kesteven District Council AQAP

4.1 Consultation and Stakeholder Engagement

In developing/updating this AQAP, we have worked with other local authorities, agencies, businesses, and the local community to improve local air quality. Schedule 11 of the Environment Act 1995 requires local authorities to consult the bodies listed in Table 4.1. We consulted on this AQAP in early 2024 with stakeholders and methodology for consultation is detailed below.

- Website
- Articles in local newspaper
- Questionnaire available via online survey platform
- Localised marketing campaign.

The response to our consultation stakeholder engagement will be published within the final AQAP.

Table 4.1 – Consultation Undertaken

Consultee	Consultation Undertaken
The Secretary of State	No
The Environment Agency	Yes - proposed
The highways authority	Yes - proposed
All neighbouring local authorities	Yes - proposed
Other public authorities as appropriate, such as Public Health officials	Yes - proposed
Bodies representing local business interests and other organisations as appropriate	Yes - proposed

4.2 Steering Group

As part of developing this Action Plan, a steering group was established to review the existing actions that are in progress to improve air quality within the South Kesteven District Council's Air Quality Management Area as well as any future actions. This steering group will also oversee the implementation and monitoring of the actions contained within this and future revisions of the Action Plan.

This steering group is chaired by the Head of Service – Public Protection and consist of the following internal service areas:

- Environmental Health – Environmental Protection Leads
- Sustainability & Climate Change Lead
- Waste Services
- Planning Policy Team
- Housing Maintenance Services

The internal steering group liaise directly with relevant external stakeholders which include:

- Lincolnshire County Council – Highways
- Lincolnshire County Council - Assisting Development Team
- Lincolnshire County Council – Public Health

5 AQAP Measures

Appendix A: Response to Consultation

Table A.1 – Summary of Responses to Consultation and Stakeholder Engagement on the AQAP

Consultee	Category	Response
Director of Public Health at Lincolnshire County Council	Other public authorities	<p>Thank you for the opportunity to comment on this draft Air Quality Action Plan produced by South Kesteven District Council. The overall position is well explained in the plan, and I am pleased to endorse it. It is good to see that concentrations of Nitrogen Oxides (NO_x) are decreasing in the Air Quality Management Area declared in Grantham town centre. Whilst national objective levels are set, the view is that no level of air pollution is deemed to be safe for humans. South Kesteven District Council's ongoing commitment to reduce levels further in the centre of Grantham is, therefore, welcome.</p> <p>I am pleased to see the measures to improve air quality in Table 5.1, many of which have been developed in partnership with Lincolnshire County Council such as the Clean Air Lincolnshire website, which we will continue to develop to improve its usefulness. The focus on alternative, active travel</p>

Consultee	Category	Response
		(cycling and walking) is important, and my team will be working with South Kesteven District Council and sustainable travel officers to increase active travel rates and use of public transport, noting also the drive to improve the bus fleet and reduce emissions.

Table 0.1 shows the South Kesteven District Council AQAP measures. It contains:

- a list of the actions that form part of the plan.
- the responsible individual and departments/organisations who will deliver this action.
- estimated cost of implementing each action (overall cost and cost to the local authority)
- expected benefit in terms of pollutant emission and/or concentration reduction.
- the timescale for implementation
- how progress will be monitored

NB: Please see future ASRs for regular annual updates on implementation of these measures.
